Brabantia Rotary Airers

The **Compact** model is suitable for use in a small area and it utilises an umbrella system and the lines can be tensioned in two different ways to suit your requirements.

The **Topspinner** features arms which rotate independently of the central pole and it uses an adjustable umbrella system, meaning that you can hang your washing out at the right height from one place, saving you the bother of having to lift a heavy laundry basket around the line.

The **Lift-O-Matic** is height adjustable, enabling you to simply move the arms up and down to suit your requirements. The advantage of this feature is that you can adjust the line to suit the items you are drying, if you are drying bedding for example you will need much more height to avoid it dragging along the ground. You can also set the line to a working height that suits you perfectly.

The **Lift-O-Matic Advance** has the same features as the Lift-O-Matic but it can be operated ultra-lightly with the counter-balance 'EasyLift' system.

The **Smartlift** is designed to eliminate the need to bend down. Simply unlock the foot pedal once, and lift the rotary to the ideal position without bending your back. The innovative double-stem design raises the arms with no effort at all. Lift once and watch the SmartLift glide from a storage height to your ideal height. The patented 'Line tight' system keeps drying lines taut at all times when in use.
